Building Massachusetts's Local Thermal Energy Economy

Massachusetts is the 12th most petroleum dependent state in the country. Although Massachusetts has about 49% of its homes and businesses connected to natural gas infrastructure, about 32% (more than 1.1 million) that do not have natural gas use heating oil.

State and Rank in the US	Petroleum Dependency*
Connecticut (8)	43.29%
Maine (4)	46.64%
Massachusetts (12)	40.37%
New Hampshire (1)	52.41%
New York (14)	37.28%
Pennsylvania (26)	35.05%
Rhode Island (7)	43.68%
Vermont (2)	51.99%

*Petroleum dependency shows the proportion of the total energy used in the state that is derived from petroleum including transportation and power generation (source: US Energy Information Administration, 2011).

As a result, Massachusetts EXPORTS more than 1.7 billion dollars every year.

	Number of Households	Average Callens	Average Total	Amount that Does	
	and Businesses that use	Average Gallons Used per Year	Expenditure Per Year	not Stay in the	Job Losses
	Heating Oil		(#2 at \$3.65/gal)	States (EXPORTED)	
Massachusetts	1,110,000	612,397,000	\$ (2,324,659,012)	\$ (1,743,494,259)	-89,072

All of the heating oil money that leaves Massachusetts takes local jobs with it: at current heating oil prices, more than 89,000 Massachusetts jobs are "exported" to OPEC nations and other locations! (See the 25x25 Vision paper at www.nebioheat.org for a full explanation of the basis for the job loss estimates.)

If Massachusetts were to convert only 18.5% of its homes and businesses* from heating oil to locally produced biomass fuels such as pellets, chips, or cordwood used in modern efficient stoves and boilers, it would create about 14,000 permanent and stable jobs. Some of those jobs would be for the production and supply of wood fuels and some of those jobs would be created by no longer exporting money.

Economic growth and job creation, Energy independence, and Environmental stewardship are the rewards of using regionally produced renewable energy for heating Massachusetts's homes and businesses.
